

### *ECO Plastics Specification Statement:*

*“At ECO Plastics customer satisfaction is paramount and therefore we must be quality focussed. As a business providing recycled plastic material for direct food contact we must comply with the most stringent of quality standards Those standards are rigorously enforced throughout our business and are applied to our outputs which are destined for industrial applications where meeting customer specifications is a key element of commercial success. As a founding member of the Resource Association we have been heavily involved in the formulation of the quality specifications and the value and contamination chart and fully support its publication. Due to the inconsistency of our feedstock and the lack of supplier specifications we have found it necessary this year to invest £200,000 in moving our supplier material assessment function from 30% of incoming material checked to 100%. Our expectation is that by carrying out this function that we can work collaboratively with our supply chain, improve quality and over time move to a position where we can introduce and publish generic specifications for our raw material feedstock.”*
